[Sedum S-Pod Design](#)

**Lightweight** - weighing in at just 55kgs per m2 these trays are nearly half the weight of the traditional mat system. Reducing the weight enables you to make savings on the structure and foundations of your building, including joist size and distance. Please always check the loading weight with you builder or structural engineer.

**Longer lasting** - we are the only British grower of the tray system to include a filter fleece layer to stop the organic matter leaching into the drainage chamber. We also use the unique British leca expanding clay to stop the loss of water in the hot summer months, this also allows the reverse in winter. Keeping your sedum healthy all year round with minimal maintenance.

**Quick and easy to install** - when your trays arrive they simply get placed down on the roof and click together to form the instant Green roof covering, No mess. Anyone can install the roof and no prior green roof knowledge or experience is needed, we can advise if needed.

**British native sedums** - over many years we have developed or special mix of sedum to include the 4 British native sedums Sedum Acre, Sedum Fostererianum, Sedum Anglicum and Sedum Sexangulare. We have included other carefully selected sedums that are tolerant to the British weather and climate ensuring quality sedum all year round. They flower from May to Sept.
